EX.NO:3A DATE:

SHELL SCRIPT

AIM: To write a Shell script to reverse a given digit using looping statement.

PROGRAM: echo "Enter a number:" read n reverse=0 while [\$n -ne 0]; do remainder=\$((n % 10)) reverse=\$((reverse * 10 + remainder)) n=\$((n / 10)) done echo "Reversed number: \$reverse"

INPUT & OUTPUT:

```
(kali⊗kali)-[~]
$\forall \text{rev.sh}$

\( \left( \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{kali} \right) \cdot \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
\( \text{kali} \cdot \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
\( \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
\( \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
\( \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
\( \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \text{conditions} \)
```

RESULT:

Hence, reversing number using shell script is executed successfully.
